We're all in this *together*™

## FiberMat®- Recycled After 7 Years of Outstanding Performance

Norjohn Contracting and Paving placed a FiberMat® Type A wearing surface at the entrance to one of their many aggregate locations in 2007. The FiberMat® which utilized 2 oz./sy of fiberglass was then subjected to daily heavy truck traffic in and out of the facility. Finally, after seven years of exceptional performance Norjohn decided it was time to replace the pavement.

A standard milling machine removed the FiberMat® and 4 inch's of HMA in one pass, the milled material was then placed in a RAP pile located at their hot mix asphalt facility. Later the recycled FiberMat® and RAP material was processed with conventional crushing and screening equipment to be reused in another quality HMA pavement produced and placed by Norjohn Contracting and Paving.
